rodolfocroes@hotmail.com

AI Systems Architect, Co-Founder, and Lead Developer specializing in designing and deploying end-to-end AI solutions across logistics, retail, real estate, and multi-entity business operations. Combines strong theoretical AI foundations with hands-on experience building production-grade systems integrating machine learning, LLMs, and enterprise data platforms (e.g., SAP Business One).

Proven track record delivering high-impact AI systems including forecasting pipelines, container optimization engines, document automation platforms, and full-stack operational dashboards. Experienced in leading client engagements, translating business challenges into scalable AI architectures, and delivering measurable ROI through automation and decision intelligence.

Education and Certifications

- **M.Sc. Artificial Intelligence,** University of Stirling, UK. **2023 - 2024**
- **B.Sc. Computer Science,** Coastal Carolina University, USA. **2016 – 2020**

Technologies and Languages

- **Languages:**
  Python, C, Java, R, SQL
- **Cloud & Infrastructure:**
  Google Cloud Platform (GCP), AWS, Microsoft Azure, Docker, WSL
- **AI / ML / Data:**
  Scikit-learn, XGBoost, PyTorch, TensorFlow, Keras, Pandas, Feature Engineering Pipelines
- **LLMs & AI Systems:**
  OpenAI (GPT via API & Custom GPTs), Claude, Claude Code, Gemini, OpenClaw, Cursor IDE
  LangChain, Prompt Engineering (CoT, ToT), Multi-agent workflows
- **Automation & Orchestration:**
  n8n, ClickUp Automations, API integrations, Workflow pipelines
- **Vision & Generative AI:**
  Image Generation (Nano Banana), Video Generation (Google Veo 3.1)
- **Other:**
  System Design, Data Engineering, Parallel Computing, Search Algorithms, AI Product Development

Professional Experience

Co-CTO & Lead AI Developer

U4RIA AI LTD (UK) | July 2025 – Present

- Leading development of bespoke AI systems across industries including logistics, manufacturing, retail, and real estate.
- Architected and built full-stack AI platforms combining LLMs, ML models, and automation pipelines.
- Developed reusable AI solution frameworks to accelerate delivery across clients.
- Unified multiple operational workflows into a single dashboard-based system

Co-Founder & AI Specialist

RAIA VBA (Aruba) | March 2025 – Present

- Co-founded an applied AI and data engineering company delivering AI solutions across logistics, retail, finance, and public sector organizations.
- Designed and deployed machine learning forecasting systems for large-scale food distribution operations across Aruba and Curaçao.
- Built container optimization and purchasing automation systems, improving inventory planning and shipment efficiency.
- Integrated AI systems with SAP Business One, enabling real-time operational insights and decision support.
- Delivered end-to-end AI pipelines including data ingestion, feature engineering, model training, and deployment.
- Led client-facing engagements, translating business needs into technical architectures and implementation roadmaps.

Software Developer (AI & Backend) ***(Subcontract)***
VapVapEats | March 2026 – Present

- Contributing to backend systems and AI feature development for a multi-vendor delivery platform in the Caribbean.
- Developing AI modules including:
  - Dynamic pricing models
  - Delivery time estimation systems
  - Personalized recommendation engines
  - Fraud detection frameworks
- Supporting platform scalability as it expands across multiple islands.

Projects & Prototypes

RentHub Software Platform (U4RIA)

- Built a comprehensive fleet and logistics management system, including:
  - Fleet tracking dashboard with real-time rental status
  - Calendar-based operational overview of contracts
  - AI-powered contract generation using email data
  - AI-powered email summarization and categorization engine
  - Gas price intelligence extraction from communications
  - Integration with freight and truck exchange systems

AI Forecasting & Container Optimization Suite (RAIA)

- Built ML-based demand forecasting models for large-scale food distribution.
- Designed container packing optimization system balancing volume, weight, and logistics constraints.
- Integrated with SAP Business One for operational deployment.

Avatar & AI Video Generation Platform Prototype (U4RIA)

- Developed a generative AI system for creating **commercials and ads** using:
  - AI avatars via Google Nano Banana
  - Video generation via Google Veo 3.1
  - Scripts for commercials via Google Gemini
- Enables rapid production of marketing content across multiple formats and styles.

OM (Offering Memorandum) Document Generator Prototype (U4RIA)

- Built automated document generation system using **LoopNet-style real estate data**.
- Generates fully branded documents aligned with U4RIA design standards.
- Reusable system adaptable to different data schemas and property types.

LLM Optimization Research (University of Stirling)

- Led research on **Tree of Thoughts (ToT) prompting and search algorithms**.
- Implemented A* search and reasoning frameworks for LLM improvement.
- Demonstrated improved performance on GSM8K and reasoning benchmarks.

Retail ML Pipeline (University of Stirling)

- Built full ML pipeline for store performance prediction.
- Applied multiple models (Logistic Regression, Decision Trees, MLP).
- Achieved strong predictive performance through feature engineering and tuning.

Stochastic Optimization Model (University of Stirling)

- Designed optimization system using random search and hill climbing algorithms.
- Determined optimal crop harvesting strategies in Minecraft under stochastic conditions.

Certifications and Courses

- Generative AI with Large Language Models by DeepLearning.AI and AWS - Link
- Azure AI Fundamentals by Microsoft - Link

Key Strengths

- End-to-End AI System Development
- Applied Machine Learning & Forecasting
- LLM Systems & Prompt Engineering
- AI Product Architecture & Deployment
- Workflow Automation & Integration
- Client-Facing Solution Design & Delivery
